Are you wasting valuable time manually entering inventory data into your accounting system?

Are you trying to save labor costs in your warehouse and operations?

Do you want to know precisely what is in your warehouse at all times?

ACCU-DART is the Ideal Inventory Management Solution!

ACCU-DART is a real-time inventory control solution, designed to integrate directly with Sage 300 ERP software. Using radio-frequency scanners, ACCU-DART allows the warehouse staff to instantly and easily update the ERP system, ensuring that all users throughout the organization have the most up-to-date information.

➤ **Save Time:** ACCU-DART updates transactions directly to the Sage 300 ERP system in real-time, saving time in the warehouse and office, and increasing efficiencies.

➤ **Improve Inventory Accuracy:** ACCU-DART verifies that the correct items are being scanned for every transaction, reducing errors and improving inventory accuracy.

➤ **Affordability:** ACCU-DART is 100% modular – purchase only the functionality needed to improve your business operations.

➤ **Functionality:** ACCU-DART is a functionally-rich solution, offering a wide variety of modules that can be customized to your unique needs.

"ACCU-DART has proven itself to be an extremely cost-effective way of generating huge efficiencies. The integrated hardware and software of this system have generated a very quick – and sustained – payoff for Can-Save. ACCU-DART makes us more efficient and more competitive."

- Dan McArthur, CanSave

ACCU-DART
INVENTORY MANAGEMENT SOLUTIONS

Get Control of your Inventory with ACCU-DART

ACCU-DART is a real-time inventory control solution, designed to integrate directly with Sage 300 ERP software. Using radio-frequency scanners, ACCU-DART allows the warehouse staff to instantly and easily update the ERP system, ensuring that all users throughout the organization have the most up-to-date information.

Save Time

By updating your inventory transactions in real-time, you will save countless labor-hours, both in the warehouse and the office. ACCU-DART is integrated directly with your ERP system - when a transaction is posted, it is automatically updated in the ERP software. There are no additional databases to maintain or data to reconcile, making it quick and easy to use.

The old way: When an order was ready to be shipped, the warehouse staff took the order, grabbed all the items, and wrote down what they shipped. At various points in the day, all the paperwork was delivered to a data entry clerk who manually entered all items into the ERP system.

The ACCU-DART way: When shipping an item, the warehouse staff simply take the order, scan each item, enter a quantity, lot or serial number information (if appropriate), and scan the next item. When the order is complete, they press "Post". ACCU-DART automatically updates the ERP software. There are no additional steps or manual data entry to be processed.

Improve Inventory Accuracy

ACCU-DART verifies directly with the Sage 300 ERP software that the correct items are being scanned for every transaction. This significantly reduces errors, and ensures that you always know exactly what is happening with your inventory in real time.

The old way: By manually updating inventory in batches, errors often resulted in incomplete or out of date inventory information. This greatly affects purchasing decisions, sales, inventory counts, and much more.

The ACCU-DART way: By verifying the items scanned, ACCU-DART prevents the wrong items from being processed in each transaction. Every time a barcode is scanned with ACCU-DART, it verifies in the ERP solution that this is the correct item. This ensures that you have accurate inventory information at all times, allowing you to make better purchasing decisions, quicker sales, and much more.

ACCU-DART also tracks valuable lot and serial number information. Simply scan the barcode for the serial/lot number, and ACCU-DART verifies in real-time that this information is correct.

"ACCU-DART has decreased mistakes and increased information and productivity for much less than was quoted to me by other WMS vendors"

- Larry Moody, General Manager
McDaniel Metals, Inc.

Affordability

ACCU-DART is an affordable inventory control solution. Each feature is priced as an individual module, making it easy to purchase the exact functionality you need. ACCU-DART is also quick and easy to install, allowing you to get up and running quickly.

The old way: many warehouse management systems are sold as packages – you pay a fee for certain functions, many of which you may not need for your operations.

The ACCU-DART way: By purchasing only the modules you need, ACCU-DART is a more affordable solution.

ACCU-DART is 100% modular – start with as little as one RF user and one function – you can add more functions and users "a la carte" as needed.

Functionality

ACCU-DART offers a large collection of modules which provide essential functionality for your business. Our functionality ranges from the basic inquiry modules to the comprehensive Ship Sales Orders, Receive Purchase Orders, and Physical Count functions. Modules can also be customized to suit your operational needs.

The old way: settling for a warehouse management system that doesn't fit your unique needs. Buying an out-of-the-box solution means limited customization, and limited functionality.

The ACCU-DART way: With ACCU-DART, get the exact functionality you need! Our list of available modules is growing all the time, and includes • Ship Sales Orders • Receive Purchase Orders • Physical Count • Warehouse Transfers • Serial & Lot Control • and well as integration with other 3rd party solutions like AutoSimply Manufacturing software and Orchid Systems' Bin Tracking application*. Need something unique? Speak with your reseller to see if we can customize a solution to fit your needs.

ACCU-DART is an affordable, easy-to-use inventory management solution that will improve your business operations. Please visit www.accu-dart.com for more information, or to see a video demonstration of how ACCU-DART works.
